

Title for lab : Abstraction and Encapsulation

1. Write a C++ program to demonstrate abstraction using an abstract class Shape. Create derived classes Circle and Rectangle that implement the area() function.
2. Write a C++ program to demonstrate encapsulation using a Student class. Store the student's name and age as private data members. Use setter and getter methods to assign and display the values.
3. Write a C++ program to demonstrate abstraction using an abstract class Employee. Create derived classes Manager and Programmer that calculate and display salary.
4. Write a C++ program to demonstrate encapsulation using a BankAccount class. Keep the account balance private. Use setter and getter methods to assign and display the values.
